

EDUCATION:

University of Rochester — Rochester, NY

B.S. Electrical & Computer Engineering | Expected May 2028

GPA: 3.45

Relevant Coursework: Mechatronics and Embedded Systems, Digital Logic Design, Computer Organization, Signals, Circuits, Probability, Electronic Devices, Semiconductors

SKILLS:

Programming: C/C++, Verilog/VHDL, HTML, CSS | **Engineering Tools:** Onshape (3D CAD), Soldering, Microsoft Excel

Technical: Circuit Analysis, System-Level Debugging, Hardware-Software Integration

WORK EXPERIENCE:

Primergy — Interconnection & Transmission Intern

Intern | Jun 2026-Present

- Rebuild and maintain interconnection process trackers across 3 different utilities, translating tariffs and business practices into standardized milestones, payment requirements, risks, and source-linked documentation
- Analyze project interconnection and acquisition risk by developing Excel diligence trackers and project-specific milestone/payment models covering queue status, schedule, cost assumptions, security requirements, and other development risks
- Develop Salesforce workflow improvements with the Engineering and Development teams, translating team needs into business requirements that reduce duplicate data entry, link project records, and prioritize time-sensitive reviews

Incoming Students Summer Program — Saint Catharine Academy

Summer Program Instructor | May 2023-Aug 2023

- Led hands-on STEM workshops for 20+ students, translating core engineering concepts into interactive activities
- Maintained a safe, structured classroom by enforcing procedures and addressing student needs

Summer Youth Employment Program — Bronx Works

Applied Research Assistant | Jun 2022-Aug 2022

- Engineered and prototyped energy optimization and water purification systems, applying iterative design and testing to evaluate performance, efficiency, and real-world feasibility
- Analyzed design constraints and trade-offs, communicating findings through technical presentations to program stakeholders

PERSONAL PROJECTS:

C++ Console Game

Personal Project | Sep 2025-Present

- Develop a modular C++ console game with procedural maze generation, structured game loops, player state management, and input handling
- Build gameplay systems including minigames, HUD displays, and text-based animation while documenting development through a public YouTube showcase (750+ views, 26 comments)

Nintendo 3DS System Configuration & Firmware Exploration

Independent Technical Project | Apr 2025-Sep 2025

- Configured custom firmware and homebrew on Nintendo 3DS hardware, investigating boot processes, system behavior, and low-level system configuration
- Applied low-level troubleshooting and documentation skills to debug system issues and examine hardware-software interaction

VEX Robotics Competition — Team 9717A

Lead Mechanic & Lead CAD Designer | Sep 2021-May 2024

- Led robot mechanical design and CAD development in Onshape, integrating drivetrain and manipulator systems while balancing performance, reliability, and efficiency
- Mentored 8+ students in CAD, mechanical design, and shop safety throughout the building process

Honors & Awards: VEX Robotics Regional Design Award, VEX Robotics State Judges Award x2, Dean's List, BridgeUP Scholar

Interests: Robotics, Renewable Energy Systems, FPGA Design, Power Infrastructure, Baseball, Ultimate Frisbee

Languages: English (Fluent), Spanish (Fluent), ASL (Intermediate)
